

JUNE 24 - AUGUST 23, 2019

UNDERGRADUATE RESEARCH EXPERIENCE IN SEATTLE

JISAO.UW.EDU

NINE-WEEK SUMMER INTERNSHIP OPPORTUNITIES IN ATMOSPHERIC SCIENCE, OCEANOGRAPHY, FISHERIES, METEOROLOGY, CHEMISTRY, AND MORE

Each summer the University of Washington (UW) Joint Institute for the Study of the Atmosphere and Ocean (JISAO) places ten undergraduate interns with UW and NOAA scientists for a nine-week summer research experience.

JISAO is committed to promoting diversity and building an inclusive community of environmental scientists. All undergraduate students, especially those traditionally under-represented in the sciences, are encouraged to apply.

RESEARCH — Research at JISAO, UW, and its NOAA partners span the range of environmental sciences with specific emphasis on atmospheric and oceanic sciences. Possible research activities include lab work, computational modeling, and participation in field studies. The chosen applicant's research interest and abilities will be matched with UW or NOAA scientists and the needs of their research programs.

"I found this internship incredibly valuable. I feel as though I got to experience the different aspects of what a career in research would entail — from field and lab work to data analysis and presenting results." ~ Nicola Paul, 2016 intern

INTERNSHIP BENEFITS — Students will receive a stipend of \$4,500. JISAO also covers the cost of travel to and from Seattle and provides housing on the University of Washington campus.

APPLICATION — For more information and to apply visit jisao.uw.edu/internships. Applications are due by February 1, 2019.

QUESTIONS — Contact Jed Thompson at jedthom@uw.edu.
