 San Juan Regional Cancer Center - Farmington, NM  
 Southwest Navajo Tobacco Education Prevention Prog. - Winslow, AZ

## Diné College -

has developed a unique summer program for Native American students interested in public health research and has provided the program every summer since 2000. The vision of SREP at Diné College is to prepare Native American students for careers in public health and health research and to strengthen research capabilities of Tribal Colleges and Universities.

The program is available to undergraduate college students who have completed some course work in English, Math, Lab Science and Social Science areas, and provides a culturally supportive atmosphere for developing a strong, multicultural approach in public health and health research work. The 10-week program will help students to develop skills and interests in public health and health research and participate first hand in community based, ongoing projects at Diné College, the Navajo Nation or other Native American communities.

While participating in SREP, the students receive:

- \$5,760 stipend (distributed in installments through the program)
- Books and Materials
- 7 transferable college credit hours (4 classroom and 3 practicum)
- Coverage for all college fees and tuition.
- During the 3-week training session at Diné College Tsale Campus, room and board are provided without charge for all program participants.
