

# Summer Internship Opportunities

CONSERVE facilitates the adoption of on-farm water treatment solutions that enable the safe use of nontraditional irrigation water on food crops and effectively reduce the nation's agricultural water challenges that are exacerbated by climate change. DAWN is developing a decision support system that helps to increase land, nutrient, and water use efficiency in order to maximize crop production in maize, soy, and bioenergy fields. The goals and visions of both programs are firmly grounded in impactful research, extension and education at the nexus of food, energy, and water systems. Apply now for our positions located in the Mid-Atlantic and Midwest.

## Internship Details:

- Duration: 10 weeks (Jun 5—Aug 11, 2022)
- Stipend: \$6,000
