

As some of you may know, applications for the NASA Internship 2023 Summer Session are now open! The deadline is fast approaching, **March 1st**, so I encourage anyone who is even a little interested in applying for a few internships to go to the [Official NASA Internships](#) site. Here are a couple of new opportunities that may be of interest to the MAIANSE community:

1. [Astrobiology: Diversity, Equity, Inclusion](#)
2. Earth Observations and Indigenous Communities – Link coming soon!

Feel free to create an account, search for some opportunities that sound interesting to you, and even apply to a few! Again, the current deadline for submitting applications for the summer session is **March 1st, 2023**.

Before I say *tókša aké* (see you later), I also want to offer **virtual information sessions** from the MAIANSE team about internships and other NASA opportunities. These can be done over Zoom or Microsoft Teams. Contact me if you're interested in setting something like this up for your class!

Hope you're having a good start to your week, and please reach out with any questions,

Karen Moore (they/them//she/her)
